

Photos

Edit:

You can use the Photos editing tools to easily make simple changes to your photos, such as rotating them or cropping them to get the best framing.

Click to make adjustments, apply filters, or crop and straighten photos.

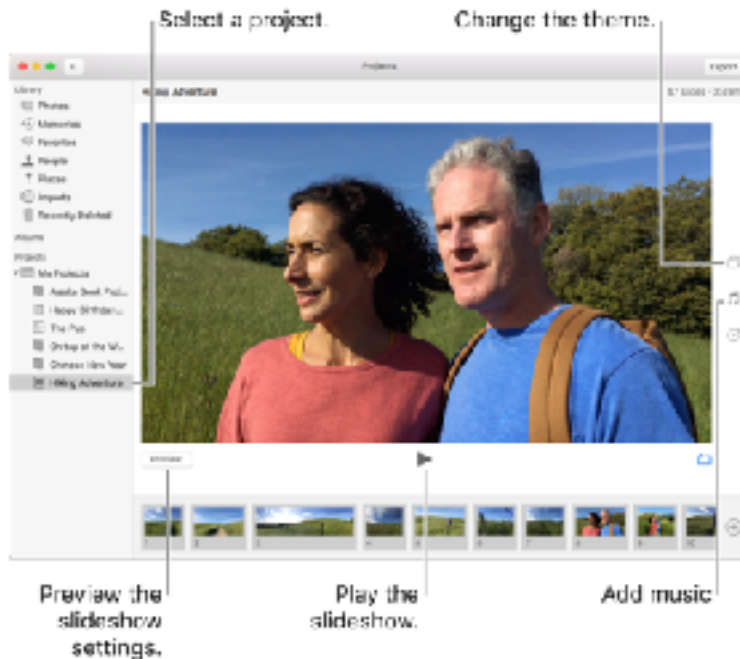

Adjustment tools

When you change a photo, Photos keeps the original so you can always undo your changes and revert to the original look.

Changes you make to a photo appear everywhere the photo appears in your library—every album, project, and so on. If you want to give a photo a unique look that appears in only one version of the photo, first duplicate the photo and work on the copy.

Create (slideshow, card, calendar):

You can use a group of photos to create a slideshow, then add text, choose a theme, add music, and set how long each slide appears. You can also include video clips in a slideshow, and export the slideshow to play on a Mac, iOS device, or Apple TV.

Note: You can quickly view a group of photos as a slideshow without creating a slideshow project. For more information, see [Play an Instant slideshow](#). For information about sharing a slideshow, see [Export photos, videos, and slideshows](#).
